

SIFT1M construction | 16 physical cores

Construction API wall time
Current: -6.40% time

Time until index is query-ready
Current: -6.37% time

One build per variant. Both include quantizer training and encoding. Original API includes native I/O; current API is in memory.
Query-ready time adds current input loading or original index/metadata reload. Warm file cache.
Historical run: one NUMA socket, no interleave; these are not 64-thread/interleave measurements.
