

# SIFT1M: current HVS vs original HVS

1,000,000 base vectors · 10,000 queries · 128 dimensions · T=1, M=16, efConstruction=500

Full query path includes rotation and distance tables. One build per variant; one timed sample of all 10,000 queries per configuration.  
Historical run: 16 physical build cores, one NUMA socket, no interleave; same GCC 14.3 -O3 and OpenCV/Eigen/zlib, OpenCV 1 thread.
